No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                US-10-037-417-46

Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders.

Claim 9a; Page 142; 323pp; English.

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (AB093092). NOVX proteins and nucleic acids encoding them (AB093092). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of NOVX cassociated disorders or in the manufacture of a medicament for treating associated disorders or in the manufacture of a medicament for treating cassociated disorders or in the manufacture of a medicament for treating cassociated with Sports of a medicament for treating cassociated with Sports of them of the 24 cassociated with Sports of sold medicament for the 24 cassociated with NOVX proteins including neurological disorders (e.g., Alzheimer's Huntington's and parkinson's diseases), cash, behavioural disorders, addiction, tuberous sclerosis, cancers of e.g., allergies and autoimmune diseases), myasthenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., phypertension), reproductive disorates, endometriosis, incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, circontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, diabetes, circontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disporters, polycystic kidney diseases, endocreations, incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disporters, or incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disporters, or incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disporters, or incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disporters, or incontinence, psoriasis, scleroderma, alopecia, obesity, bacterial infections and particularly dates or downstream effectors which as neurogenesis, cell differentiation. NOVX nucleic acids sequences can be used to identify a cell or tissue type and comprising NOVX nucleication of identifying and cloning NOVX homologues in other cell types ore

The invention relates to 24 novel human proteins designated NOVI-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABE098879-ABE09302). NOVX proteins and nucleic acids encoding them (ABE098879-ABE09302). NOVX proteins and nucleic acids encoding them (ABE098879-ABE09302). NOVX proteins and associated disorders or in the manufacture of a medicament for treating associated disorders or in the manufacture of a medicament for treating such disorders with specific applications described for each of the 24 NOVX proteins, based on their homology to known proteins. Various disorders (e.g., Albraimer's 's' Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., allergies and autoimmune disorders, myasthenia gravis, asthma, various forms of arthritis diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, cardiomypathy, cincontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, cinchosis, glomerular endotheliosis, polycystic kidney disease, endocrine corrinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, disorders, obesity, bacterial infections and parkinalarly cardiomypathy, disorders, obesity, bacterial infections and parkinalarly cardiomypathy, be used to identify callular receptors or downstream effectors which be used to identify and are also useful as targets for the correspication, haematopoiesis, wound healing and angiogenesis. Correspication, haematopoiesis, wound healing and angiogenesis or inclication as a source of primers or probes for forensic biology and for are useful as a source of primers or probes for forensic biology and comprising NOVX mucleic acids are useful for producing non-inman and enimals which are useful deviating and evaluating modulators of nover an animals which are useful deviating and evaluating modulators of nover inferiors and for identifying and evaluating and evaluating modulators of NOVX proteins an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TrpValLeuSerAlaAlaHisCysPheMetThrAsnGlYThrLeuGluProAlaAlaGlu 100

```
The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are cand the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lumgy, immune-related diseases and disorders (e.g. infilammatory diseases at asthmal, cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. disorders, pain, sexual dysfunction, mood disorders, attention cdiseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, confiling disorders, hypertension, psychotic disorders, neurological disorders, hypertension, pypertension, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency cure liffy, and non-viral infections such as ocular disease (e.g. sequences encoding for the novel human procteases of the invention
